

YubiKey as a Service

An industry-first cybersecurity service that fast tracks organizations to strong phishing resistance and passwordless at speed and scale.

Enabling strong security while driving business acceleration

Organizations are looking for better and more efficient ways to harden defenses against AI-powered cyber attacks, while making it easier for users to adopt best practices and enhance productivity. A single corporate security breach in 2025 cost an average of \$4.44 million.¹ With compromised credentials via phishing being the most common initial attack vector, stronger and more phishing-resistant approaches such as those with modern hardware security keys offer the highest level of protection. Yubico, building on its years of security innovation with ground-breaking multi-factor authentication (MFA) technology in the form of hardware security keys—YubiKeys—has made it easier than ever before for security conscious organizations to adopt modern MFA at scale.

YubiKey as a Service simplifies security and accelerates enterprise rollouts

With the growing threat of AI, where attacks have become faster and more targeted at massive, organizations need to protect all of their users to reduce breach exposure.

YubiKey as a Service offers smart enterprises a flexible and cost effective way to adopt modern cybersecurity at scale and protect the entire ecosystem including the workforce, suppliers and end customers. Your business is constantly evolving, from new hires and employee turnover, to remote and hybrid work environments, and support for new infrastructure needs. And with users working across desktop, mobile, shared workstations, and using the latest devices and modern authentication, you benefit from maximum flexibility in choosing YubiKey form factors based on device type and user preferences over time. YubiKey as a Service takes all of this into account and delivers phishing-resistant and passwordless authentication with a laser focus on speeding up your time to market with world class security.

YubiKey as a Service benefits

Lower cost to entry

- Value over multiple years
- Includes extended warranty
- Discounts on additional replacement and backup keys and more

Flexibility and choice

- Choice of YubiKey form factors
- Upgrades to other keys within the tier over time (e.g. USB-A to USB-C)
- Various pre-enrollment options to meet different enterprise workflows

Faster deployment

- A range of enrollment and key delivery services to fast-track user onboarding
- Purchase credits can be applied towards Professional Services
- Dedicated Customer Success Manager—24/7/365 Priority Support

Achieve compliance

- Keys with latest certifications to meet latest regulations
- Eligible for up to 25% additional keys to cover employee turnover or lost/replacement keys

Organizations can experience the strongest ROI for their YubiKey rollouts with a security as a service approach—experiencing fast rollouts at tremendous global scale.

Stronger security that's flexible and cost-effective

Gain efficiency with turnkey services that accelerate deployments and simplify IT or user actions

Customers are automatically entitled to access the [console](#), a web-based interface that helps organizations easily view orders, shipments, inventory status and a wide range of other information that helps with enterprise planning. Customers are also eligible for additional services and product offerings, such as [YubiEnterprise Delivery](#), a global turnkey hardware key distribution service to residential and office locations around the world. [Yubico Enrollment Suite](#), another set of services available to customers, can pre-enroll YubiKeys on behalf of IT and users to enable faster deployments. With YubiKey as a Service, customers are eligible to access new services and enhancements as they become available.

Enrollment

Enroll YubiKeys on behalf of IT or users for fast onboarding

Continual enhancements

Only for YubiKey as a Service customers

YubiKey as a Service tiers deliver flexibility and choice

Organizations have the choice of three key service tiers to align with the needs of the business and users. The Base tier is a great starting point for organizations that are just getting started on their journey towards modern MFA, catering to primarily cloud environments. The Advanced tier is better suited for more complex scenarios with legacy, cloud, and hybrid environments. Lastly, the Compliance tier is ideally suited for organizations that have strong compliance requirements or wish to introduce biometrics for added user convenience.

Compliance

*Universal coverage
(Certified, Biometric)*
YubiKey 5 FIPS Series, YubiKey Bio Series

Advanced

*Enterprise essentials
(Multi-protocol)*
YubiKey 5 Series

Base

*Entry point solutions
(FIDO-only)*
Security Keys

YubiKey as a Service highlights

Turnover/upgrades

Choose any YubiKey now and upgrade easily to the latest YubiKeys (within the same subscription tier) as they become available. Customers are eligible to qualify for up to 25% of YubiKeys of their subscribed users per year and this can also be used for replacements for lost, stolen, or employee turnover reasons. Additional replacement keys are also available.

Backup key discounts

Get an additional discount for purchasing backup YubiKeys for your users, to enable easy self-service account recovery without compromising security via a weaker authentication mechanism.

Professional Services

YubiKey as a Service includes a percentage of your purchase as an incentive available to apply toward Professional Services.

Priority Support

Easy access to Yubico security experts with 24x7x365 priority support.

Customer Success Manager

An assigned customer advocate will assist you post purchase, to increase adoption of YubiKeys, help manage your inventory, and collaborate to ensure your security goals and timelines are met.

Extended warranty

The warranty is extended through the life of your first YubiKey as a Service plan term, including the first renewal.

Eligibility for value-added services

Customers have access to YubiKey as a Service-exclusive services and additional capabilities. They are also eligible to become pre-configured security keys available through Yubico FIDO Pre-reg enabling users to become protected seamlessly in minutes.

Get the highest-assurance passkeys trusted by the world's leading companies

Strong ROI and reduced risk and costs

In a commissioned study conducted on behalf of Yubico, Forrester Consulting recently interviewed security leaders from five enterprises using YubiKeys and found that for the composite organization the results are dramatic:

 **203%**

ROI over 3 years

 **99.9%**

Reduction in exposure to phishing and credential theft

 **75%**

Reduction in helpdesk tickets

Prevent man-in-the-middle attacks and eliminate account takeovers

Any software downloaded on a computer or phone is vulnerable to malware and hackers. Additionally, centralized servers with stored credentials can be breached. [The YubiKey](#), containing the highest assurance device-bound passkeys, is based on hardware with the authentication secret stored on a separate secure chip built into the YubiKey, with no connection to the internet so it cannot be copied or stolen. With the YubiKey, the data is encrypted with strong public key cryptography where only the public key is stored on the server, eliminating risks.

Easy to use, fast, and reliable

Users don't need to install anything and can use the YubiKey in minutes. And the YubiKey is reliable because it does not require a battery or network connectivity, so it's always on and accessible.

YubiKeys deliver strong user authentication across platforms and devices

Easy to deploy

IT can deploy YubiKeys in days, not months. A single key, through its flexible multi-protocol capabilities, can work out-of-the-box with hundreds of systems, both cloud and on-premises. This eliminates the need for costly integrations or separate devices for each system, and can support passwordless, strong two-factor and multi-factor authentication scenarios.

Trusted authentication leader

Yubico is the principal inventor of the [WebAuthn/FIDO2](#) and FIDO U2F authentication standards adopted by the FIDO Alliance and is the first company to produce the U2F security key and a multi-protocol FIDO2 authenticator.
